Introduction

Overview

Welcome

The Global User Station (GUS) Display Search Tool runs on a Honeywell **TotalPlant** Solution (TPS) System Global User Station. It is used to

- locate and list which points are used in a selected .pct file,
- locate and list which embedded GUS displays are used in a selected .pct file, and
- define which GUS displays contain a given point or embedded GUS display.

In this section

This Introduction section describes the content and purpose of this document, for whom this document is intended, other document resources, and how to get help using this product.

When should I use this tool?

Here are just a few reasons for using the search tool. When first building GUS displays, the GUS Display Search Tool provides an easy means of listing which points have been included in the display. You can compare that list to your list of points for that area of the process, to ensure those points that were intended to be associated with the display have been included.

When making changes to the process, you may want to make a change to a point, and you need to know what parts of your process (that are depicted by GUS displays) would be impacted by that change. The GUS Display Search Tool provides you with a very easy way to enter the point name and obtain a list of all GUS display files containing that point name.

It could also be used when processes are updated or modified to include new components, or when adjusting or rearranging an existing portion of a process. Or when a display is being modified, or it is being copied to be used for a similar process in another area. With this tool, you can determine which points or GUS embedded displays are associated with a display, prior to editing or copying the display file.

About This Document

Purpose of document

This document provides you with information on the use of the GUS Display Search Tool, along with examples of the steps required to use the GUS Display Search Tool from a Global User Station.

Intended audience

This document is written for those who are trained and/or experienced in

- operation in the MS Windows environment,
- operation and navigation of a Global User Station, and
- point names, GUS display files and their contents, and GUS embedded displays.

Other document resources

Generally, this document contains information only pertinent to the use of the GUS Display Search Tool. For information and procedures regarding other aspects of GUS displays, please refer to one or more of the following documents.

Document Name	Document Number	Binder Number
Display Builder User's Guide	GU23110	
Picture Editor Reference Manual	SW09-550	TDC 3032-2
Picture Editor Form Instructions	SW12-550	TDC 3032-3
Picture Editor Data entry	SW11-550	TDC 3032-3
Actors Manual	SW09-555	TDC 3032-2

Product Support

If you need assistance

In preparation for, and during the use of the GUS Display Search Tool, if you need technical assistance, contact your local Honeywell Service Organization or the Honeywell Technical Assistance Center, as explained in the following paragraphs.

International customers

Outside of the United States, contact your local Honeywell Service Organization. If you are not sure of the location or telephone number, call your Honeywell representative for information.

Customers inside the United States

Within the United States, call the Technical Assistance Center (TAC) at the toll-free number 800-822-7673.

Arizona customers

Within Arizona, the local number for TAC is 602-313-5558.

Run GUS Display Search Tool

Run GUS Display Search Tool

Introduction

In preparation to run GUS Display Search Tool

Prior to running GUS Display Search Tool, note the path (directory/file pathnames) to your existing picture files. You can locate them under File Manager.

If you are not sure where the files are located, in Windows File Manager use the

File,
Search...,
Search For: *.pct method for a list of GUS Display files (.pct).

For file management that will be of benefit in software upgrades in the future, the directory name containing your .pct files should reflect the revision of GUS Display Builder under which those files were created.

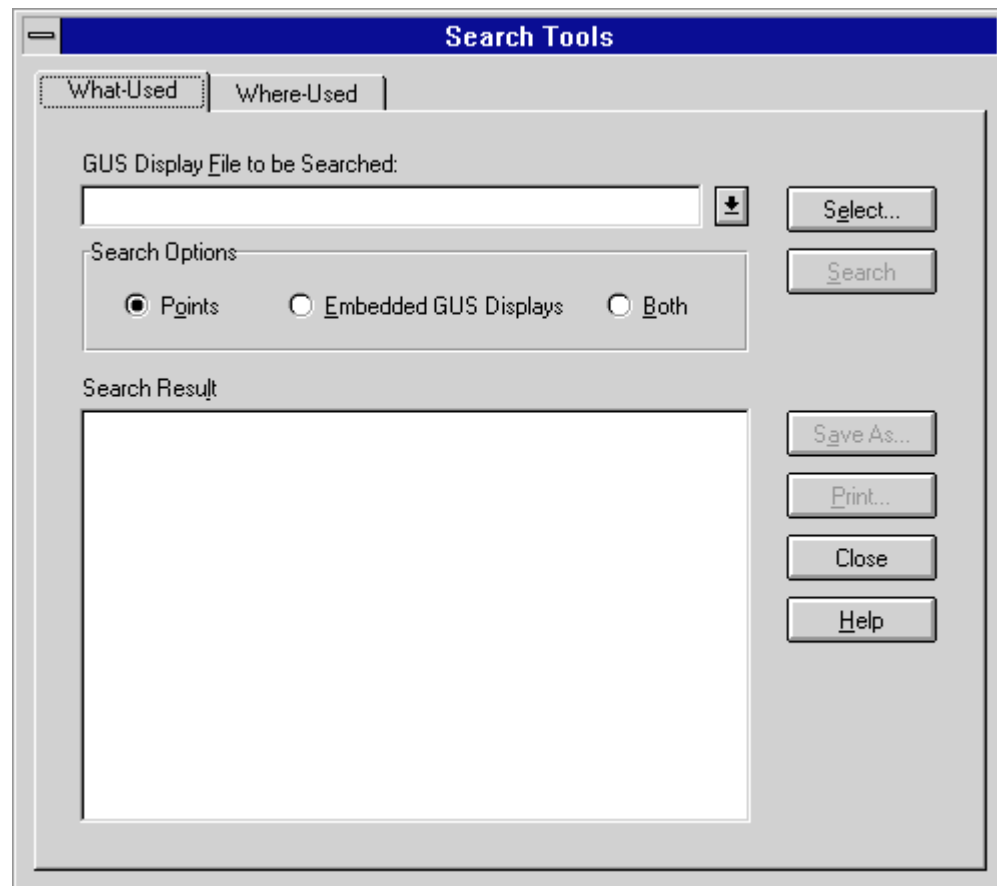

Example: Name the directory GPB10019, for GUS Display Builder version 100.0.19. Place all your current .pct files in that directory. Later, when going to a newer GUS Display Builder software release, the display files can be migrated and placed in a directory whose name includes the new version of GUS Display Builder.

How The GUS Display Search Tool Works

Components

The GUS Display Search Tool is made up of a dialog box with two tabs. The tabs are labeled “What-Used” and “Where-Used,” each containing their own unique set of search and selection choices.

By default, when the Search Tool is first opened the “What-Used” tab is displayed as the front tab, as shown in the figure below.

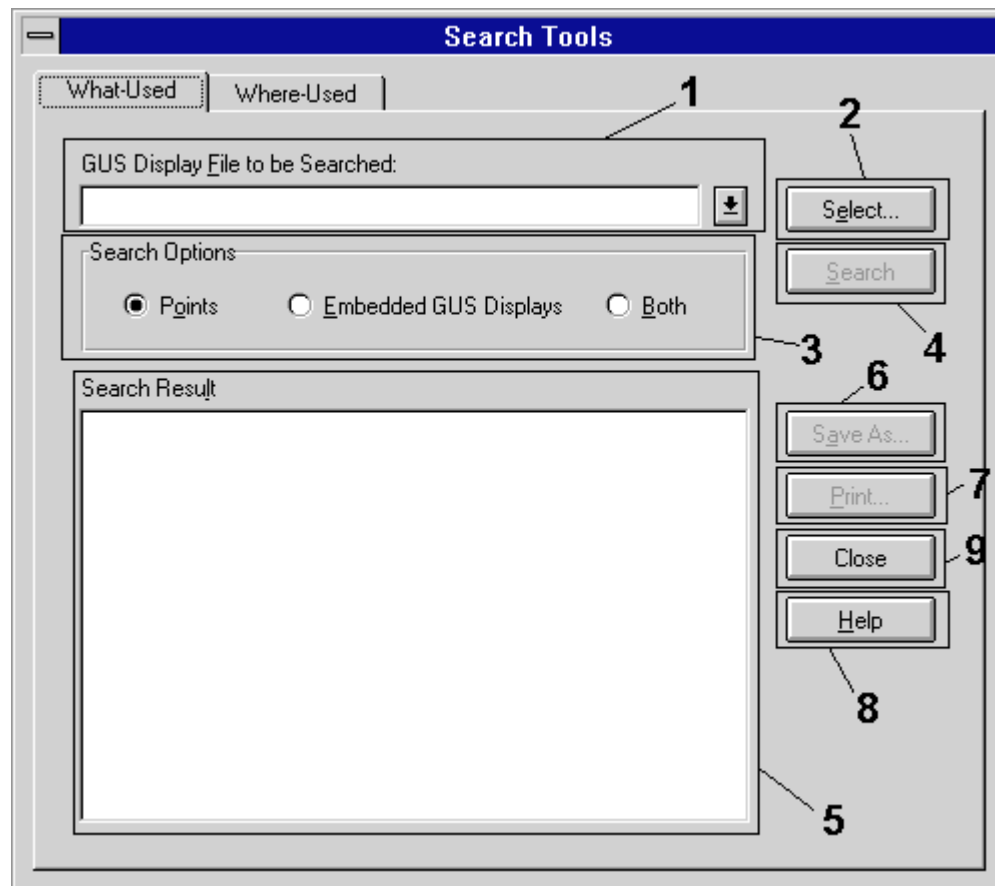

20000

Functions of the What-Used tool

The **What-Used** tab allows you to search for point names and embedded GUS displays that are contained in a particular GUS Display file.

Below are the components of the “What-Used” tab, followed by a description of each.

20023

Notice that some of the buttons are “grayed-out.” This is a way of showing the buttons or fields that are not selectable at this time. (Search, Save As..., and Print... in this case.)

For an example of why this would occur, since there has been nothing identified in the GUS Display File to be Searched: field, the Search button is grayed-out, and will remain grayed-out until the GUS Display File to be Searched: field is populated.

Run GUS Display Search Tool

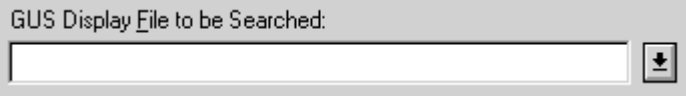

ATTENTION

The descriptions of the Search Tools that follow contain actions where the mouse is used to select various buttons and fields.

You can also select buttons and fields by holding down the Alt key, and pressing the letter that corresponds to the underlined letter in the button or field name.

Use CAUTION: There are some cases where an upper case or lower case letter must be specified.

The table below contains a description of each of the “What-Used” components.

Ref #	“What-Used” Component Description
1	 Contains the (.pct) GUS Display file you want to search. Can be defined by using one of these methods: - Click the <u>S</u>elect... button, and select the appropriate drive, directory, and file, or - Enter exact pathname (Example: C:\Honeywell\GUS\bin\stirtank2.pct), or - If files have previously been found, select the  button, and select the desired .pct file from the list of files.
2	 opens a Select dialog box, which allows you to choose the .pct file to be searched, by selecting the appropriate drive, directory, and file.
3	Search Options gives you three choices of what you are searching for within that GUS Display File, as follows:  Points With this selected, the Search Results will contain all point names associated with the selected display.  Embdedded GUS Displays With this selected, the Search Results will contain all embedded GUS displays associated with the selected display.  Both With this selected, the Search Results will contain all points and embedded GUS displays associated with the selected display.

Run GUS Display Search Tool

Ref #	"What-Used" Component Description
4	 Once a GUS Display File has been selected, and the desired Search Option has been selected, clicking <u>S</u> earch will cause the What-Used software to search the selected GUS Display File. When the search is finished, if associated points and/or embedded displays were found, the search results will be displayed in the Search Result field. If no points or embedded displays were found, a message similar to the one below will be displayed. 
5	 If the Search Option "Points" is selected, this field will contain an alphabetical list of all point names associated with the selected GUS Display file. If the Search Option "Embedded GUS Displays" is selected, this field will contain an alphabetical list of all Embedded GUS Displays associated with the selected GUS Display file. If the Search Option "Both" is selected, this field will contain an alphabetical list of all point names and Embedded GUS Displays associated with the selected GUS Display file.
6	 allows you to save the currently displayed search results into a text file (.TXT). Clicking Save As... brings up a dialog box, where you can select the appropriate drive and directory, or choose a network server, then type a file name for that .TXT file.

Run GUS Display Search Tool

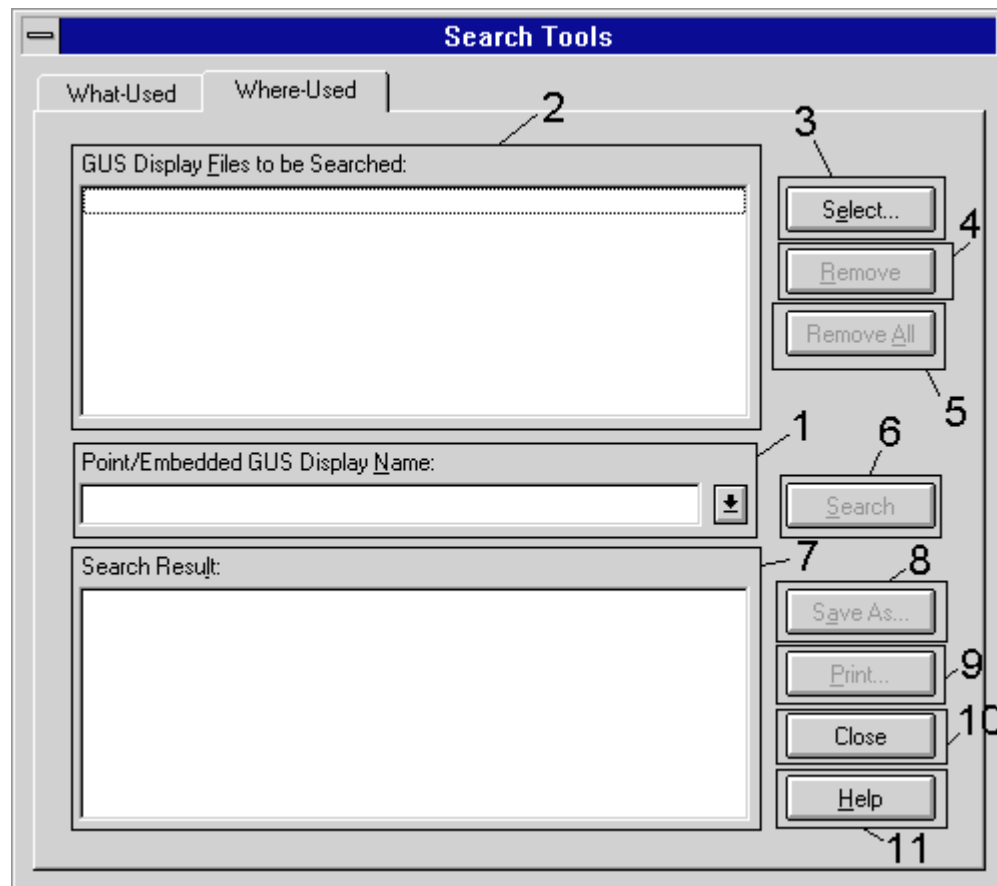

Ref #	"What-Used" Component Description
7	Selecting  allows you to print the currently displayed search results on the connected printer of your choice. Example printer output: <pre>Result of search for Points And Embedded GUS Displays in C:\Honeywell\GUS\bin\ LCN.FIC21946.OP LCN.FIC21946.PV LCN.FIC21946.SP POSVALVE.PCT .</pre>
8	Selecting  takes you to a help display, where you can search on key words to locate the specific Search Tool information you need.
9	Clicking  exits you out of the What-Used/Where-Used search tool, and removes the Search Tools dialog box from the screen.

Functions of the Where-Used tool

The **Where-Used** tab defines which GUS Displays are associated with a given point or with a given embedded GUS Display.

In simplistic form, this is accomplished by entering a point name or an embedded GUS display file name in the Where-Used dialog box, then telling the Where-Used tool to search the selected GUS Display files.

Below are the components of the “Where-Used” tab, followed by a description of each.

20026

Run GUS Display Search Tool

The table below contains a description of each of the “Where-Used” components.

Ref #	“Where-Used” Component Description
1	Point/Embedded GUS Display Name:  Contains the point name or the embedded GUS display file name on which you want to search. It can be defined by using one of the following methods: - Enter exact point name (Example: lcn.tic22375.sp for search on a point), or - Enter exact Embedded GUS display name (Example: benzine5.pct), or - Click the  button. This opens a list of point names and/or .pct file names previously entered in this field (It will be empty the first time you use this tool). Then select a point name or embedded GUS display file from that list. Attention! Wild cards (* and ?) cannot be used in this field.
2	GUS Display Files to be Searched: Contains the GUS display files you want to search. You choose these files by clicking the <u>S</u>elect button on the Where-Used dialog box. For further selection details, See the description of the <u>S</u>elect button in Ref # 3 below.
3	 Opens a “Select” dialog box, from which you select the GUS display file(s) you want to search. Using the Select dialog box, you select the appropriate disk drive, the directory, and the .pct file to be searched. TIP: After you have clicked the <u>S</u>elect button, and have located a list of .pct File Names (some of which you want to include in the search list), you can hold down the Ctrl key and randomly click (select) each file you want to search. Each of the selected files will be highlighted. When all files desired for the search have been selected, click the <u>S</u>elect button on the Select dialog box. This will place the selected file names in the “GUS Display Files to be Searched:” box. You can then select additional .pct files from other drives and directories by reopening the “Select” dialog box and selecting a different drive and/or directory.
4	 If you have placed a file name in the “GUS Display Files to be Searched:” box that you do not desire to be searched, you can highlight that file name and click the <u>R</u>emove button once to delete it from the list.

Run GUS Display Search Tool

Ref #	"Where-Used" Component Description
5	 If none of the file names in the "GUS Display Files to be Searched:" box are to be searched, you can remove all of them from the list by clicking the Remove <u>A</u> ll button.
6	 Once a point name or an embedded GUS display name has been placed in the "Point/Embedded GUS Display Name:" box, and the name(s) of the .pct file(s) to be searched are in the "GUS Display Files to be Searched:" box, click the <u>S</u> earch button to start the search.
7	 If any .pct files (from those listed in the "GUS Display Files to be Searched:" box) are found to contain the requested point name or embedded GUS display name, those .pct files, including their entire pathname, will be listed in the Search Result: box. The results will be listed alphabetically.
8	 allows you to save the currently displayed search results into a text file (.TXT). Clicking <u>S</u> ave As... brings up a dialog box, where you can select the appropriate drive and directory, or choose a network server, then type a file name for that .TXT file.
9	 allows you to print the currently displayed search results on the connected printer of your choice. Example printer output: Lcn.fic21946.sp is used in the following GUS Display files: C:\Honeywell\GUS\bin\burner14.pct
10	 Clicking <u>C</u> lose exits you out of the What-Used/Where-Used search tool, and removes the Search Tools dialog box from the screen.
11	 Selecting <u>H</u> elp takes you to a help display, where you can search on key words to locate the specific Search Tool information you need.

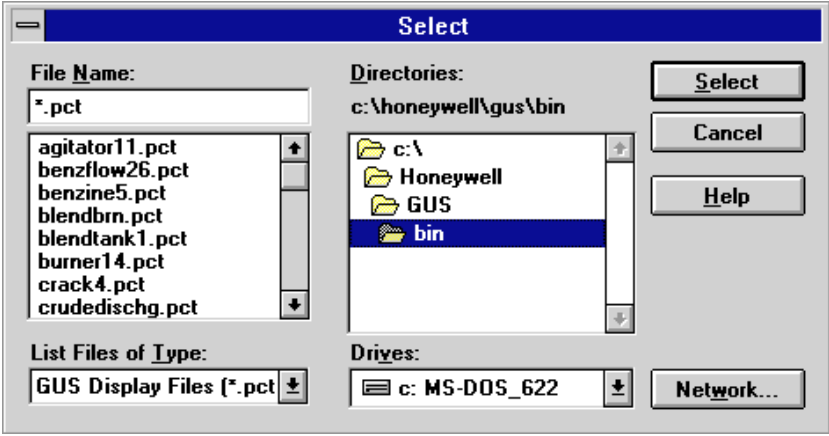

Run GUS Display Search Tool

Using The What-Used Tab

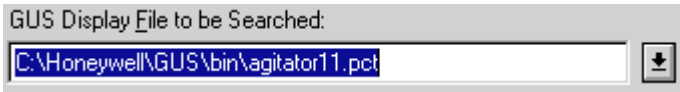

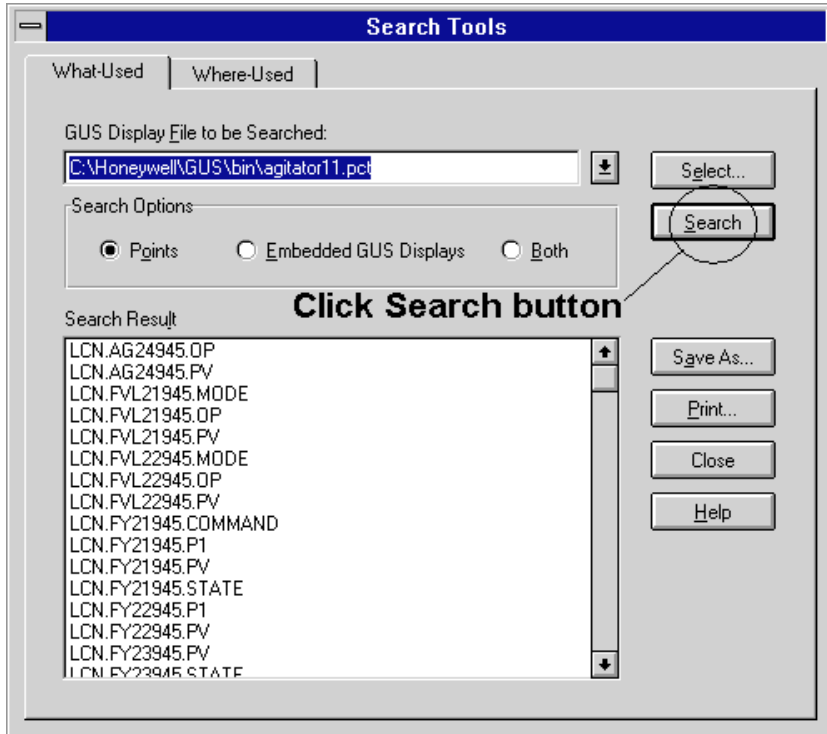

Scenario of Using the What-Used Tool

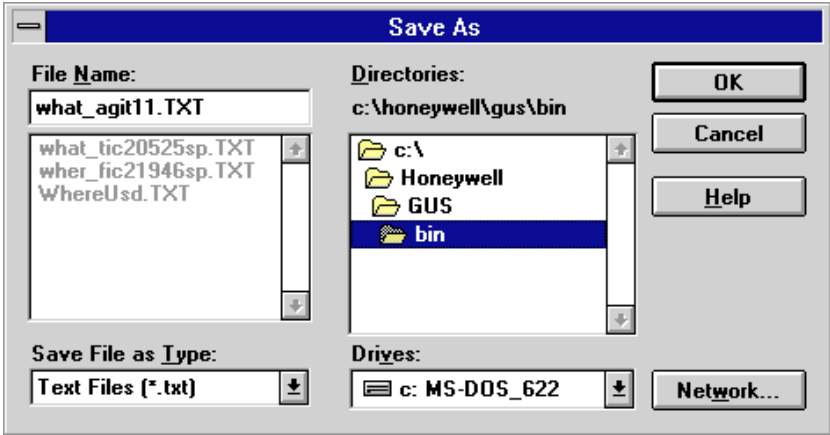

Example of steps to use What-Used tool

The following is a scenario of using the GUS Display Search Tool. In this scenario, I need to find out what points are associated with my .pct file for Agitator 11. Follow these steps to see how that is accomplished.

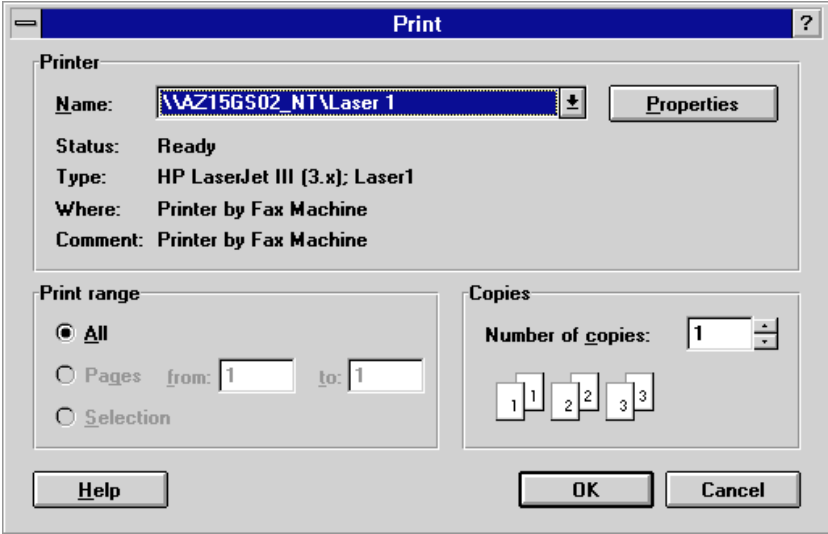

Step	Action
1	To open the Search Tool, from the GUS Program Group, I will double-click the Search Tool icon .
2	I now need to define which GUS display to search. To do so, click the  key. This brings up the Select dialog box: 
3	In this case, the proper disk drive and directory had already been selected, which brought up a list of .pct files under File <u>N</u>ame. From that list, I will Click the file agitator11.pct (That places agitator11.pct in the File <u>N</u>ame box).

Using The What-Used Tab

Step	Action
4	Click the Select button. That places the chosen .pct file and its pathname in the "GUS Display File to be Searched:" box. 
5	Now I choose my search option. In this case, I only want the point names, so if it was not already selected, I click once on ☒ Points.
6	I am ready for it to search, so I click the Search button. When the search is completed, the results are shown in the Search Result box, in alphabetical order. 

Step	Action
7	I now want to save the search results, so I'll click  which brings up a Save As dialog box. Below, I have selected the disk drive and directory where I want to save the file, and have entered a file name that applies to the GUS Display file I was searching. Now that the file name has been entered, I click OK to save it as a .txt file. 

Using The What-Used Tab

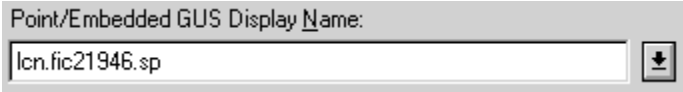

Step	Action
8	I want a printout of the search results, so I click  which opens a standard Print dialog box. I then make whatever changes are necessary to point to the desired printer, then click OK.  The screenshot shows a standard Windows 'Print' dialog box. The title bar is 'Print'. The 'Printer' section shows 'Name: \\AZ15GS02_NT\Laser 1' with a 'Properties' button. The status is 'Ready', type is 'HP LaserJet III (3.x): Laser1', where is 'Printer by Fax Machine', and comment is 'Printer by Fax Machine'. The 'Print range' section has three options: 'All' (selected), 'Pages from: 1 to: 1', and 'Selection'. The 'Copies' section shows 'Number of copies: 1' and a preview of three pages labeled 1, 2, and 3. At the bottom are 'Help', 'OK', and 'Cancel' buttons.

Using The Where-Used Tab

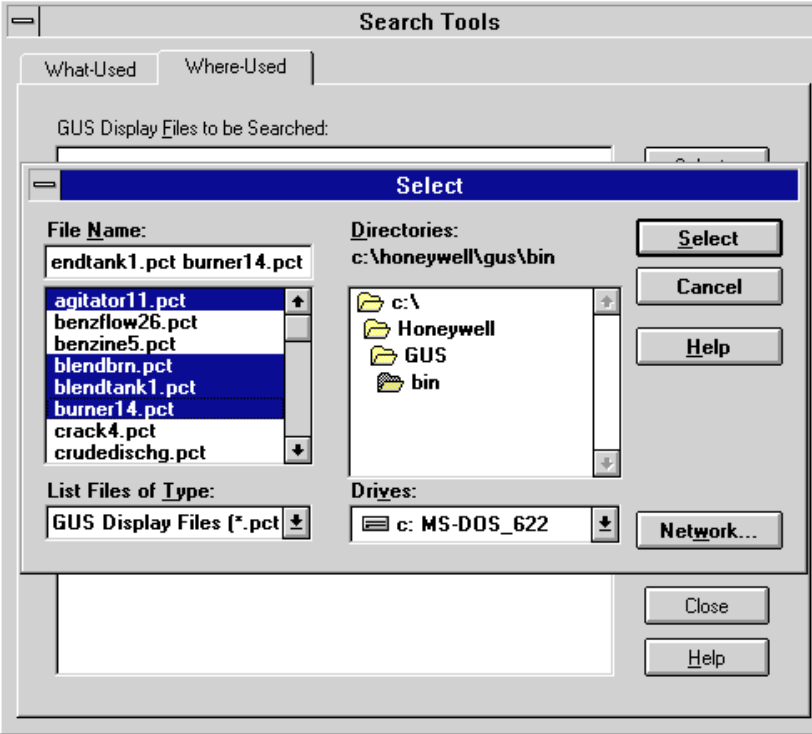

Scenario of Using the Where-Used Tool

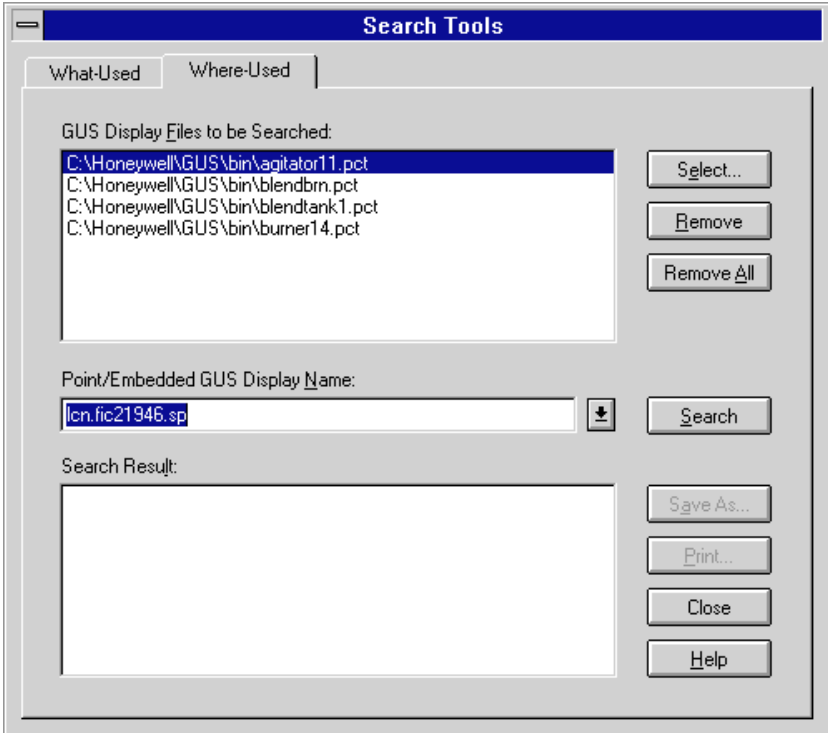

Example of steps to use Where-Used tool

The following is a scenario of using the GUS Display Search Tool to perform a “Where-Used” search. In this case, I need to find out which GUS Display files (from a selection that I will determine) have a particular point associated with them. I will choose the point “lcn.fic21946.sp.” Follow these steps to see how that is accomplished.

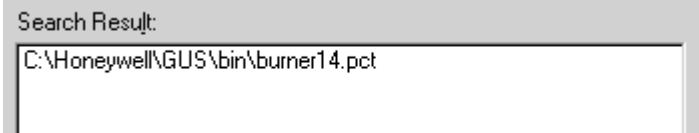

Step	Action
1	To open the Search Tool, from the GUS Program Group, I double-click the Search Tool icon.
2	Then I click the  tab.
3	I then need to enter the point name. I could type in the exact point name, or use the  key to obtain a list of already used point and .pct file names. From that list I could select the name I need, which will place it in the “Point/Embedded GUS Display <u>N</u>ame:” box, as shown below. 

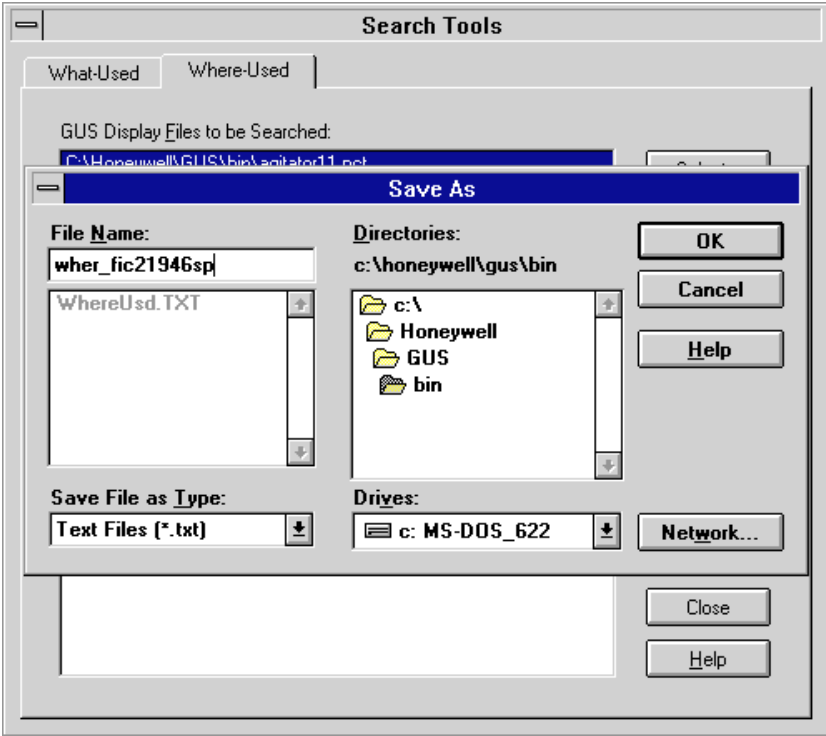

Using The Where-Used Tab

Step	Action
4	Now, I will define the GUS displays to be searched. To do so, I will click the  button, which brings up the Select dialog box.  As shown by the highlighted file names, I wanted to select four of the GUS display files (agitator11.pct, blendbrn.pct, blentank1.pct, and burner14.pct), so I held down the Ctrl key, and clicked (highlighted) each of those four .pct files.

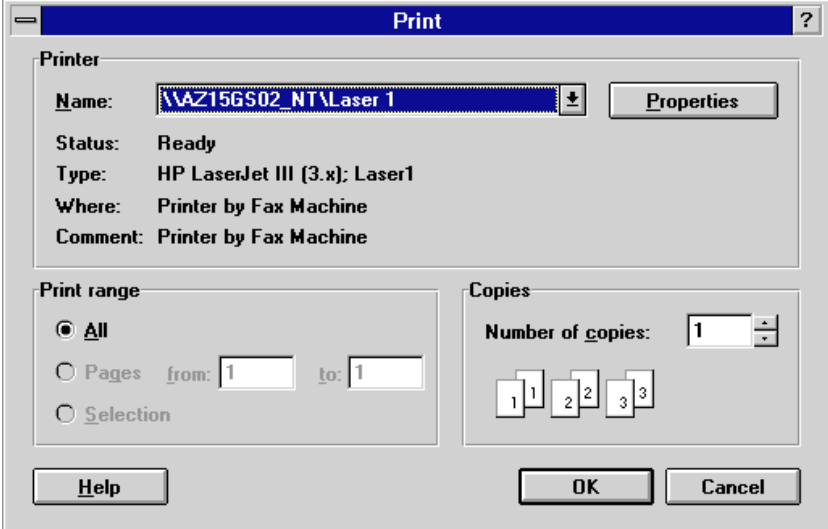

Step	Action
5	Now I click the Select button, and the selected files are placed in the "GUS Display Files to be Searched:" box as shown below. 

Using The Where-Used Tab

Step	Action
6	Now I'm ready to start the search, so I click . When the search is completed, the Search Result is displayed.  If the point was not found in any of the selected GUS display files, the following message would have appeared. 

Step	Action
7	I now want to save the search results, so I click  which brings up a Save As dialog box. Below, I have selected the disk drive and directory where I want to save the file, and have entered a file name that applies to the point name I was referencing. Now that the file name has been entered, I click OK to save it as a .txt file. 

Using The Where-Used Tab

Step	Action
8	I want a printout of the search results, so I click  which opens a standard Print dialog box, then click OK when my choices are correct.  The screenshot shows a standard Windows 'Print' dialog box. The title bar is 'Print'. Under the 'Printer' section, the 'Name' is set to '\\VAZ15GS02_NT\Laser 1', with a 'Properties' button to its right. The status is 'Ready', the type is 'HP LaserJet III (3.x): Laser1', and the location is 'Printer by Fax Machine'. The 'Print range' section has three options: 'All' (selected), 'Pages' (with 'from' and 'to' fields both containing '1'), and 'Selection'. The 'Copies' section shows 'Number of copies' set to '1' and a preview of three pages labeled 1, 2, and 3. At the bottom are 'Help', 'OK', and 'Cancel' buttons.
