About This Publication

This publication supports **TotalPlant** Solution (TPS) system network through Releases 500 - 684. TPS is the evolution of TDC 3000^X.

This manual consists of configuration forms. These forms are designed to facilitate the collection and organization of data for subsequent entry into the TPS system through the Universal Station.

ATTENTION

With TPN R684, Enhanced Universal Control Network (EUCN) is introduced. In EUCN, the traditional coaxial cable system is no longer utilized and is replaced with a Fault Tolerant Ethernet (FTE) based communication network.

Throughout the document, unless specifically mentioned, the terms HPM, NIM, and UCN are interchangeably used with the terms **EHPM**, **ENIM**, and **EUCN**, respectively.
