

Tips for searching the PDF collection

The Adobe Acrobat Search command is more powerful and flexible than the Find command. You can search across multiple documents and define advanced query criteria. Search is faster than the Find command because it reads an index rather than an entire document. The Search.PDF file, when opened online, is automatically associated with an index for the Product's PDF collection.

You can search for a simple word or phrase, or you can expand your search query by using **Refine Search Result** options.

Perform the following steps to search across the PDF files in this collection.

Step	Action	
1	Click the Search button () in the tool bar. Or choose Edit > Search . Or press Ctrl+Shift+F on the keyboard.	
		TIP When you launch the Search window for the first time, a warning message to load the index file appears. Click Load to continue.
	The Search window appears.	
		
		TIP The Search.PDF file is associated with the TPN_R6xx_TPS_R4xx_index.pdx file.
	By default, the In the index named TPN_R6xx_TPS_R4xx_index option under Where would you like to search? is selected to search in the index file for this PDF collection. Click other options as needed.	

Step	Action
2	Type the search text and then click Search .
	The Search window displays the relevant search results. The results contain the documents name and the instances of the search text.
	
3	Expand the document name to view the various instances of the search text throughout the document. The search text is highlighted in the document.
